

POND FizzyTabs™

Provide a clean pond for your fish.

Fish in ornamental ponds are greatly affected by dirty water. Organic contamination in the pond water causes stress to the fish and can contribute to a reduction of beneficial slime coat. This slime coat acts as a barrier to prevent harmful bacteria, like Aeromonas, from causing Fin Rot, Tail Rot, Mouth Rot and Hole disease. Use POND FizzyTabs™ to increase the population of beneficial bacteria and reduce the population of bad bacteria, like Aeromonas.

The SAFE, ALL-NATURAL bacteria in POND FizzyTabs™ will grow on all surfaces within the pond. This bacterial growth creates a bio-film that makes the bottom and side surfaces easier to clean! The bacteria will degrade the organic material as it accumulates, preventing the buildup of harmful nitrates, ammonia, phosphate and algae.

Bad odors, like hydrogen sulfide (rotten egg), ammonia and organic acids are the direct result of anaerobic digestion of organic material. As the organic material accumulates, the oxygen in a pond is reduced. This creates even more bad odors! POND FizzyTabs™ degrades organic material aerobically and does not allow it to build up. Use POND FizzyTabs™ to significantly reduce or even eliminate obnoxious odors in ponds!

POND FizzyTabs™ will increase oxygen levels, water quality, and bio-film. Regular, scheduled maintenance and cleaning is still very important for the health of fish, but POND FizzyTabs™ will allow reduced frequency of cleaning and make each cleaning much easier!

Application Rates:

Less than 500 liters	2-4 tablets per month
500 – 5,000 liters	4-8 tablets per month
up to 50,000 liters	8-20 tablets per month
More than 50,000 liters	contact representative
