SUCTIONLINE Fizzytabs™

Biological Suctionline Cleaner Reduces odor and organic buildup in the suctionline.

Suctionline Fizzytabs™ contain safe, naturally occurring bacillus bacteria that will digest the organic substances (like blood) and wastes that accumulate in suctionlines. Degrading this material prevent the anaerobic bacteria from thriving in the system. Since the anaerobic bacteria create the malodors, **Suctionline Fizzytabs™** will safely reduce or eliminate the odors in the system.

The bacillus bacteria in **Suctionline Fizzytabs™** are classified by the American Type Culture Collection as Biosafety Level 1 organisms. This is the safest rating. Additionally, the organisms are:

- 1) Naturally occurring (NOT genetically modified);
- 2) Non-pathogenic (will NOT cause disease); and,
- 3) Non-Opportunistic (will not cause disease in a comprised host).

Suctionline Fizzytabs™ are safe to use in all plumbing, even if your facility has a septic tank. **Suctionline Fizzytabs™** do not require special equipment or protective clothing. Simply dissolve the tablet and pour into the suctionline.

APPLICATION RATES: Make a solution by dropping in 1 **Suctionline Fizzytabs™** into a 1-2 liters of water. Allow the tablet to dissolve. Apply part of the solution directly into the suctionline and pour part of the solution into the spit sink.

Each Suctionline Fizzytab™ will treat up to 5 chairs!

FOR BEST RESULTS:

DO NOT apply with antimicrobials, disinfectants, or hot water (>170° F).
